REF #: 1234567

Hello xxxx xxxxx,

We are delighted that you have joined the probiotics revolution. You know you are different, and that is why you deserve to have your own custom made probiotic supplements.

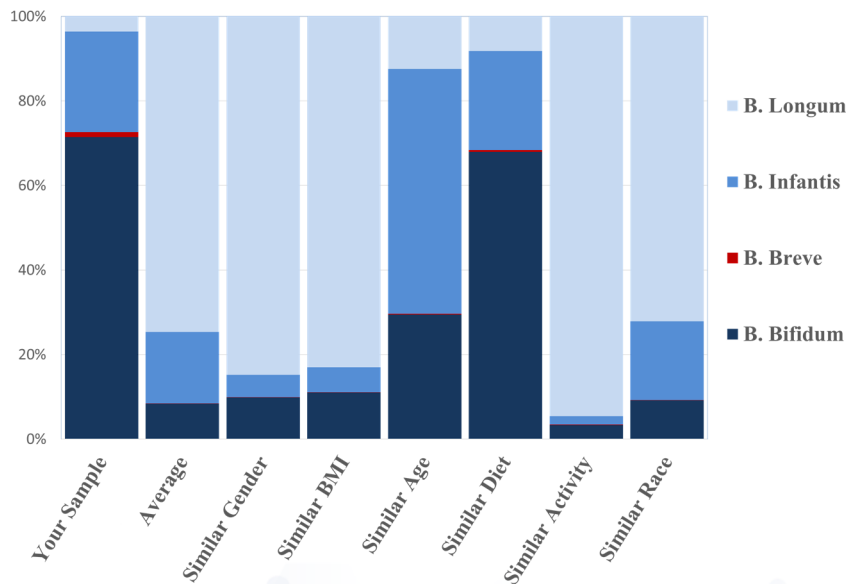

• **What happened to your sample at ProTrea Laboratories?**

ProTrea’s scientists extracted and sequenced the DNA of your gut bacteria and then analyzed your results. We used innovative DNA sequencing technology to identify 11 major strains of beneficial microorganisms that might affect your health. All of the results shown below are reflective of the 11 microorganisms we tested for.

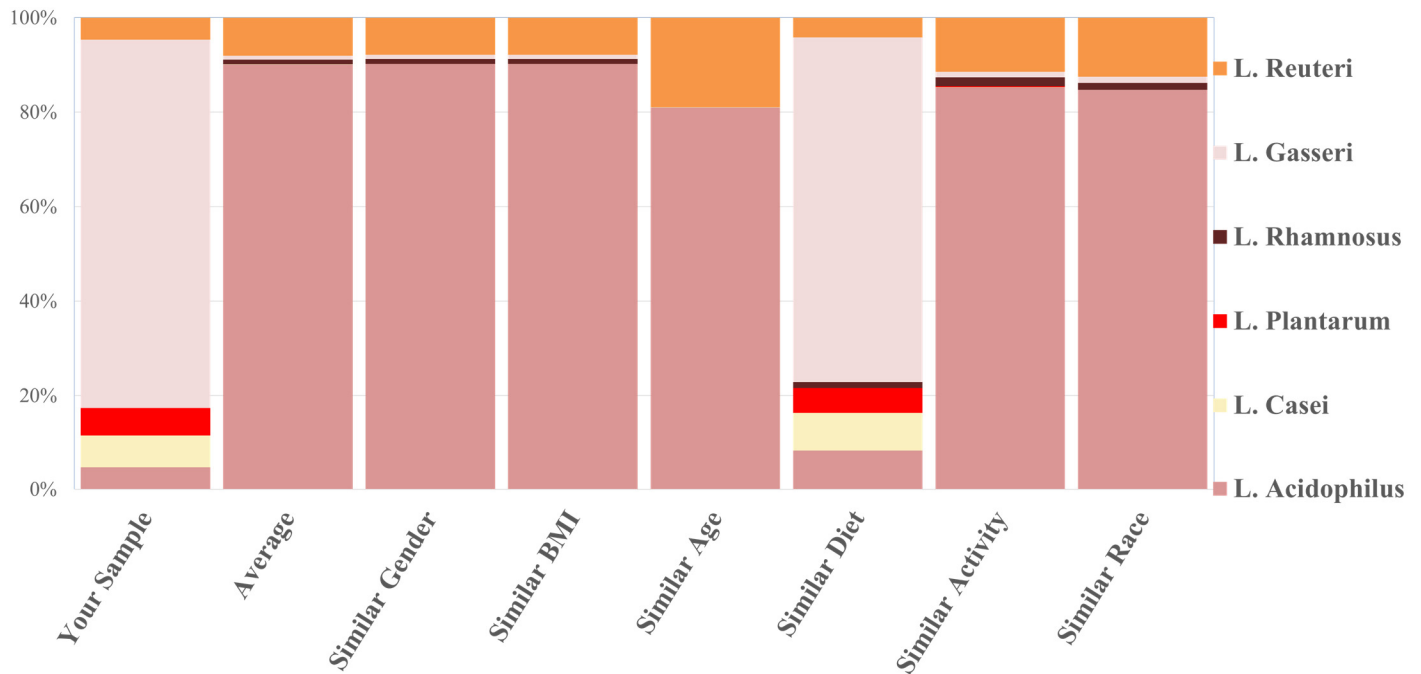

Your gut sample is inhabited with a large number of the Bifidobacterium family followed by Streptococcus Thermophilus. A very small amount of Lactobacillus was detected. Among the large gut bacterial community, Bifidobacterium is a genus which dominates the intestine and has been attributed to many different benefits to health.

• **The composition of your Bifidobacterium family**

Of the four Bifidobacterium species that we examined in your sample, we found that the majority are from the B. Bifidum and the B. Infantis group. Research have shown that maintaining healthy levels B. Bifidum is beneficial for the overall gut, immune and women health. While B. Infantis is thought to help with some gut discomforts resulting from gas and bloating.

• The composition of your Lactobacillus family

• Your personalized Plan

Of the six Lactobacillus species that we examined in your sample, we found that the majority is from the L. Gasseri group. Research have suggested that some strains of L. Gasseri could inhibit increases in body weight and adipocyte tissue weight in high-sucrose diet-fed experimental animal models. Furthermore, few clinical trials and animal-based studies suggest that L. Gasseri may help reduce abdominal fat and support weight loss.

- Based on your genetic stool sample results, your personal information and the reasons you indicated you would like to use probiotics for, our proprietary analysis system determined that the following microorganisms could use some help from ProTrea's Personalized probiotic supplements.
